

# Rejuvenate Biomed

## Healthy for life

### Our unique approach

Growing old is a natural and beautiful part of life, shaped by experiences and wisdom. In addition, aging is a complex multifactorial process, affecting many interconnected pathways.

**At Rejuvenate Biomed, we embrace the complexity of aging and focus on the healthcare challenge posed by age-related diseases.**

Our approach to drug discovery and development starts from navigating the pathways that underlie human aging, also known as the hallmarks of aging. Through innovative research and dedication, we unlock the potential to extend healthy lifespan and to enhance the quality of life.

**We develop therapeutics that directly address the fundamental causes of aging and age-related diseases, promoting healthy aging.**

### From platform prediction to clinical proof of concept

Prediction data from our drug discovery platforms **CombinAge™** and **CelegAge™** are confirmed in established preclinical models and in clinical studies

#### Platforms

Pipeline generator & drug discovery tool

CombinAge™  
*in silico*

CelegAge™  
*in vivo*

#### Assets

Developing Phase 3 ready drug candidates

*C. elegans*

Mouse

Human

### Three unique success factors

of our drug development approach

**We impact multiple aging pathways simultaneously**

by developing combination drugs

**We increase probability of success**

by using CombinAge™ and CelegAge™

**We de-risk and shorten the development process**

by starting from drugs with established human safety profiles

### Lead RJx-01 for sarcopenia

age-related loss of muscle strength

- Oral administration of new formulation
- Synergistic effect of 2 small molecules
- Patent protected for multiple indications
- Established human safety profile
- Effective in preclinical models
